On December 19, 1984, I spoke to Curtis J. Sparks, Chief, Permits Section, Division of Water Quality, Minnesota Pollution Control Agency, concerning that portion of the subject discovery request for information on permits issued or reissued to dischargers in that portion of Minneapolis within the Minnehaha Creek Watershed District. We could not identify those dischargers through our Permit Compliance System. He informed me that this area would be in the western part of Minneapolis for dischargers to Minnehaha Creek and the only NPDES discharger in the area that he knew about was the Methodist Hospital in St. Louis Park. Please note that the permittees with an asterisk above discharge into Minnehaha Creek. Mr. Sparks informed me he believes Reilly Tar is looking for anybody who takes groundwater from contaminated aquifers and has polyaromatic hydrocarbons or phenol standards in permits. Copies of my telephone calls regarding this request are attached.

We do not have any other information available other than the attached permits enumerated above. If you have any questions, please contact me at 886-6716.
